

# VIVAIO

## Quick View App Documentation

Installation & Configuration

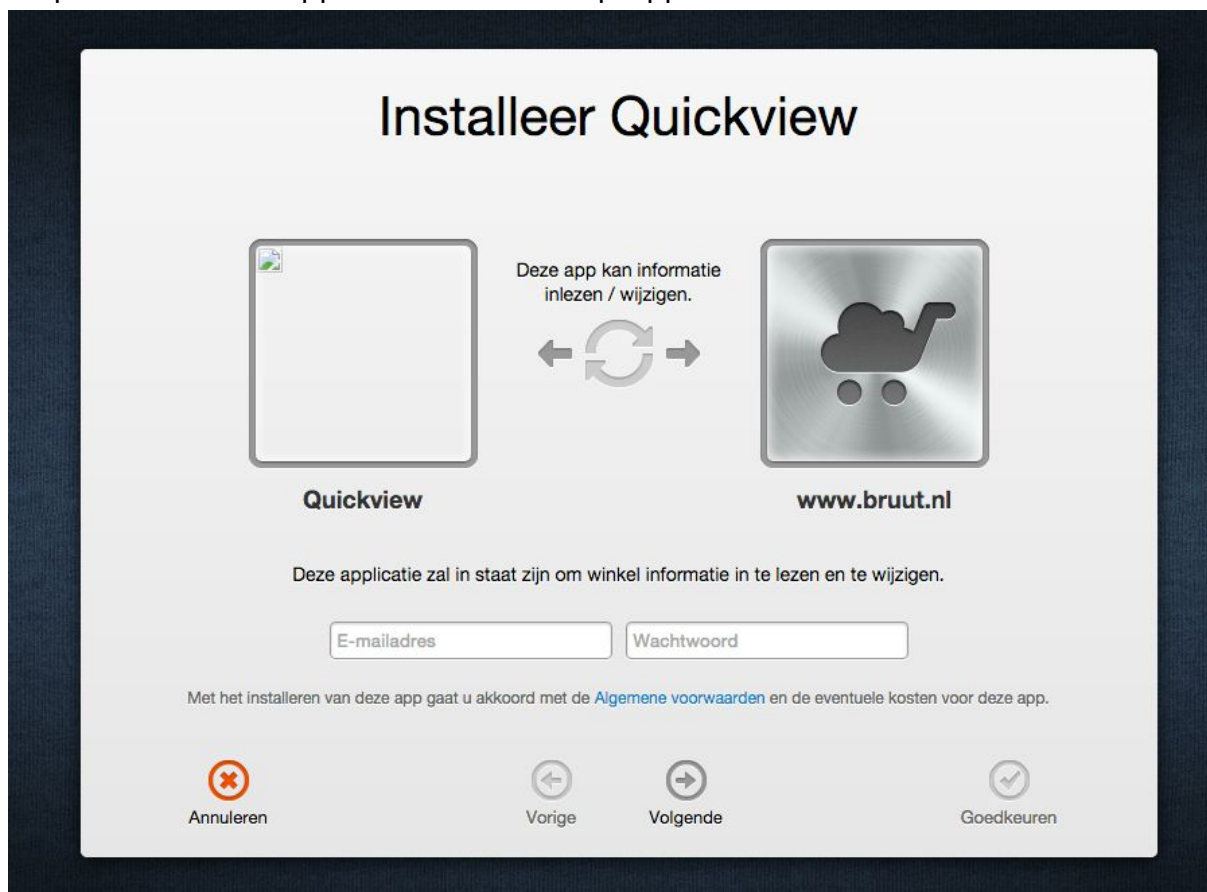

Version 1.0

The Quick View app adds instant preview options to a category page without going back and forth to product pages. It makes your webshop easier and faster to navigate. With 1 click the quick view appears as a lightbox pop-up with the product details. Now you can already add to cart from the pop-up. Easily continue to the next product with the previous/next arrows. Quick View will help visitors explore more, find the product faster, decrease the bounce rate and this will result in a boost of sales!

### Installation & Configuration

[Login URL: apps.vivaio.nu/login]

Step 1: Install the app from the SEOshop App store.

Step 2: You will be redirected to the app dashboard of Vivaio.

Step 3: Create your account and login. This account will be your Vivaio App account for all other Vivaio SEOshop apps as well.

Step 4: Select Quick View and configure the app. For example, choose the button colour or buttontext.

## Settings

### What are these codes, like #ffffff and #138509, for?

These are HTML code and can are used as a unique identification of that specific colour. You can use this code to use the same colour for a different element.
